4. Code Block

5. Algorithm

## Slides with $\text{\LaTeX}$

Beamer offers a lot of functions to create nice slides using  $\text{\LaTeX}$ .

### The basis

This style uses the following default styles:

- split
- whale
- rounded
- orchid

1. Introduction

2. Background

**3. Chinese**

4. Code Block

5. Algorithm

- 本主题支持中文。

1. Introduction

2. Background

3. Chinese

**4. Code Block**

5. Algorithm

```
# -*- coding: utf-8 -*-  
  
import torch # root package  
import torch.autograd as autograd # computation graph  
import torch.nn as nn # neural networks  
import torch.nn.functional as F # layers, activations and more  
import torch.optim as optim # optimizers e.g. gradient descent, ADAM, etc.  
from torch import Tensor # tensor node in the computation graph  
from torch.jit import script # hybrid frontend decorator and tracing jit  
from torch.jit import trace
```

1. Introduction

2. Background

3. Chinese

4. Code Block

5. Algorithm

**Input:** HOSVD( $\mathcal{X}, R_1, R_2, \dots, R_N$ )

**Output:**  $\mathcal{G}, A_{(1)}, A_{(2)}, \dots, A_{(N)}$

```

1 for  $k = 1$  to  $N$  do
2   |  $A_{(n)} \leftarrow R_n$  left singular matrix of  $X_{(n)}$ 
3 end
4  $\mathcal{G} \leftarrow \mathcal{X} \times A_{(1)}^T \times A_{(2)}^T \dots \times A_{(N)}^T$ 
5 return  $\mathcal{G}, A_{(1)}, A_{(2)}, \dots, A_{(N)}$ 

```

### Algorithm 1: HOSVD
